Haven Maintenance

Proper care of your newly installed Haven SPC flooring will help maintain its performance and appearance. Following these preventative, routine and restorative measures will ensure years of satisfaction.

Post installation:

- Dry mop newly installed flooring to remove any dust and dirt from the floor
- Spray a neutral cleaner such as Stride by Johnson Diversey onto the floor according to their instructions. Use a micro fiber wet mop pad with this cleaner, replacing the pad as needed.
- Rinse the floor by mopping with clean water to remove any excess residue.

Preventative care:

- Proper furniture protection is needed to prevent scratches and scuffs. We recommend industrial grade felt protection.
- Place chair mats underneath rolling chairs to dissipate the load and prevent damage
- Walk off mats should be used at all entrances to remove dirt and grit from entering the building
- Use neutral pH products only

Restorative care:

- Scuffs can be removed with an auto scrubber or by a spray buff solution using a low (175 RPM) speed and red pad.
